Please send your completed application form two weeks prior to date of the course to the Education Department at Hospice or email application form to education@hospice.org.im to secure a place.

Target audience

This workshop will be of interest to all registered health and social care professionals such as doctors and nurses working in hospital, the community and nursing homes who want increase their level of knowledge of medicines used for symptom management, especially with regard to drug choice.

About the course

This workshop will provide participants with an opportunity to increase their knowledge and skills in the assessment of the causes of nausea and vomiting and bowel obstruction, pain, breathlessness and constipation and tailoring treatments. Interactive case studies will be used to explore causes and treatments.

Learning outcomes

This workshop will help participants to:

- Update and increase their knowledge on the common medicines used for symptom management in palliative care.
- Understand and be able to apply drug choices for symptom control with regard to these symptoms.

Trainers: Members of the Specialist Palliative Care Team
